

SHADELIGHT® TIMBER SHUTTERS LAUCH PACK

Introduction

Shadelight® Timber Shutters provide the timeless beauty and enduring craftsmanship of a quality timber product custom made for your home. Featuring an impressive range of painted and stained colour options in a new light weight hardwood timber, the Shadelight Range offers a beautiful combination of functionality, durability and quality.

Designed to complement your interior space, the new program provides a range of shutter models including shapes to ensure a solution for a variety of installation types.

The standard hinged option is suitable for small to medium sized windows and can consist of one or more rectangular shutter panels hinged in a variety of configurations.

There are a number of bi-fold styles suitable for varying widths and window heights. The bi-fold option not only creates space but provides a modern look that allows you to enjoy seamless indoor, outdoor flow.

The sliding system allows you to cover wide openings, and is a wonderful way to treat sliding doors to match the rest of your windows. Sliding applications require the use of a top track and either bottom guides or a bottom track.

Made from hardwood timber

Made from a low density, light coloured hardwood timber which is both strong and durable. All timber is kiln-dried to improve stability and minimise the risk of bowing and warping over time.

The base timber is light coloured and has very little grain which means you will have a consistent finish when the timber is stained.

This product comes from an FSC (Forest Stewardship Council) certified manufacturing facility that uses only timber from sustainable and renewable forestry.

Large range of colour and stain options

Available in a range of 5 popular paint finishes and 7 timber stains allows you to choose a colour to complement and enhance the look of any room. The Shutters can also be custom coloured on request.

Superior paint finish

Coated with a specialised Polyurethane system which includes 3 undercoats and a top coat. Two coats are applied prior to assembly and one coat after assembly to create a perfectly even surface area before finishing with the final top coat.

Superior construction

All stile to rail joins are constructed with a fluted mortise and tenon engineered dowel system. This coupled with the waterproof Aquadhere glue will give the connecting points of the panel greater strength. Our unique construction process allows us to produce a very large single span.

Wide range of frame options

A variety of frames and mounting options are available, which are designed to meet the diverse range of consumer tastes and installation requirements. The frames, stile and T-Post can be supplied in both a plain or beaded finish.

We also now offer a Pivot Hinged installation option for situations where a frame is not ideal.

Wide range of models

Available in a wide range of models including hinged, Bi-fold and sliding configurations. This provides the flexibility to cover most window openings whilst maintaining a consistent look throughout the home.

New options are available for installing Shutters in both Corners or Bay windows and a new range of Shaped Shutters will ensure you have a complete in-home solution.
