Solar protection indicators are laboratory-tested. The most relevant and widely used thermal comfort factors are as follows:

THERMAL COMFORT				GTOT A	GTOT B	GTOT C	GTOT D
Colour	Ts	Rs	As	Glazing and Fabric			
Empire	0	7	93	-	-	-	-
Willow	0	33	34	-	-	-	-

The fenestration property tests were conducted in accordance with EN 410 (1998), EN 14501:(2005), and EN 14500:(2008).

VISUAL COMFORT

THERMAL COMFORT
Fabric Only
Ts Solar Transmittance (%) **Rs** Solar Reflectance (%)
As Solar Absorbance (%)
Solar radiation is always partially transmitted through, absorbed or reflected by the fabric. The sum of all 3 equals 100. Ts + Rs + As = 100 % of solar energy.

Fabric and Glazing
 Test data has been supplied using the following glazing types:
A Clear single glazing (4mm float)
B Clear double glazing (4mm float + 12mm space + 4mm float)
C Double glazing low-e coating and argon filled (4mm float + 16mm space + 4mm float)
D Reflective double glazing with low-e coating and argon filled (4mm + 16mm space + 4mm float)

GTOT (Range 0-1)
 The Solar Heat Gain Coefficient (SHGC), measures the window's (fabric and glass) ability to transmit solar energy into a room. The SHGC is commonly referred to as g-tot. SHGC/g-tot is a calculation of the g-values of the solar protection device (fabric) and the glazing (A, B, C, D). The lower the GTOT value, the greater its ability to insulate against solar heat build-up.

CARE & CLEANING
General Care: Dusting with a feather duster is all that is required to keep your fabric looking good.
Stains: For the removal of dirt and grime, simply wipe fabric skins with a sponge soaked in lukewarm water. If marks are still visible, add a little detergent. Then dry gently with a clean cloth.
